# Thermocapillary Convection in Models of Crystal Growth

With 101 Figures

Springer

# Contents

<b>1. Introduction</b>	1
1.1 Marangoni Effect	1
1.2 Thermocapillary Convection in Crystal Growth	3
1.3 Previous Reviews	5
1.4 Scope	7
<b>2. Basic Equations</b>	11
2.1 Volume Equations	11
2.2 Boundary Conditions	11
2.2.1 Velocity Field	11
2.2.2 Temperature Field	12
2.3 Dimensionless Equations	13
<b>3. Asymptotic Behavior</b>	19
3.1 Flow Near the Contact Line	19
3.2 Boundary-Layer Scalings	25
3.2.1 Low-Prandtl-Number Inertial Flow	26
3.2.2 Boundary Layers Near the Cold Corner	27
3.2.3 High-Prandtl-Number Thermocapillary Flow in a Hot Corner (Viscous-Convective Limit)	30
<b>4. Creeping Flow in Thermocapillary Liquid Bridges</b>	35
4.1 Method of Biorthogonal Functions	36
4.2 Thermocapillary Flow and Small Surface Deformations	40
4.2.1 Formulation	40
4.2.2 Flow Field	41
4.2.3 Temperature Field	42
4.2.4 Dynamic Surface Deformations	43
4.2.5 Flow Patterns	44
4.2.6 Aspect Ratio Limits	49
4.3 Axial Through Flow	51

<b>5. Concepts of Stability Analysis</b>	<b>59</b>
5.1 Linear Stability	59
5.1.1 Temporal and Spatial Stability	61
5.1.2 Convective and Absolute Stability	62
5.2 Energy Analysis	64
5.2.1 Reynolds–Orr Equation	64
5.2.2 Energy Equations for Infinitesimal Perturbations	66
5.3 Energy Stability	67
5.4 A Posteriori Energy Balances	69
<b>6. Plane Thermocapillary Layers</b>	<b>71</b>
6.1 Convective Stability of the Return Flow	71
6.2 Asymptotics of the Critical Values for $Pr \rightarrow 0$	80
<b>7. Convection in Cylindrical Geometry</b>	<b>83</b>
7.1 Axisymmetric Convection in Liquid Bridges	83
7.2 Linear Stability Analysis	89
7.3 Buoyant Instability	91
7.3.1 Small Prandtl Numbers: $Pr=0.02$	95
7.3.2 Large Prandtl Numbers: $Pr=1$	99
7.4 Thermocapillary Instability	104
7.4.1 Small Prandtl Numbers: $Pr=0.02$	107
7.4.2 Large Prandtl Numbers: $Pr=4$	111
7.4.3 Remarks on the Stability of Pure Thermocapillary Flows	117
7.5 Instability of Mixed Convection	119
7.5.1 Thermocapillarity Dominating	119
7.5.2 Buoyancy Dominating	123
7.6 Experimental Background	128
7.7 Three-Dimensional Simulations	132
7.7.1 Low Prandtl Numbers	133
7.7.2 High Prandtl Numbers	135
7.8 Energy Stability Analyses	140
<b>8. Convection in Rectangular Geometry</b>	<b>143</b>
8.1 Two-Dimensional Flows	145
8.1.1 Short Containers ( $\Gamma \leq 1$ )	145
8.1.2 Stationary Flow in Long Containers ( $\Gamma \gg 1$ )	147
8.1.3 Two-Dimensional Oscillatory Flows	151
8.2 Three-Dimensional Flows	154
8.2.1 Large Aspect Ratios	154
8.2.2 Side-wall Effects	154
8.2.3 Steady and Spatially Periodic Three-Dimensional Flows	158

<b>9. Extensions to Simple Models</b> .....	163
9.1 Intrinsic Properties of Thermocapillary Systems .....	163
9.1.1 Static Free-Surface Shape .....	163
9.1.2 Dynamic Surface Deformations .....	168
9.1.3 Non-Monotonic Surface Temperature Profiles .....	169
9.1.4 Moving Liquid-Solid Interfaces .....	171
9.1.5 Temperature-Dependent Material Parameters .....	173
9.1.6 Binary Mixtures and Adsorption .....	174
9.1.7 External Convection: Double Layers .....	178
9.2 External Body Forces .....	180
9.2.1 Uniform Rotation .....	180
9.2.2 Vibrations .....	182
9.2.3 Magnetic Fields .....	185
<b>A. Appendix</b> .....	191
A.1 Some Material Parameters .....	191
A.2 Stokes Flow Near the Contact Line .....	192
A.3 Biorthogonal Functions for Oseen-Type Flows .....	194
A.4 Chebyshev-Galerkin Method for Plane Layers .....	201
<b>References</b> .....	203
<b>Index</b> .....	221
